500mA Three Terminal Positive Voltage Regulators

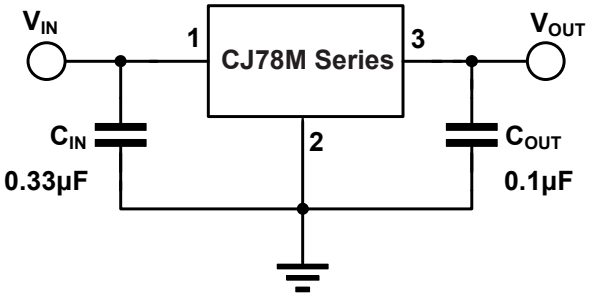

CJ78M Series Three Terminal Positive Voltage Regulators

1 Introduction

The CJ78M series is a group of three terminal positive voltage linear regulators with multiple fixed output voltages. In the case of good heat dissipation, it can provide an output current of 500mA, and has internal short-circuit protection and thermal shutdown protection, which makes it not affected by overload. In addition to being used as fixed voltage regulators, these devices can also be used with external components to obtain adjustable output voltage and current, and can also be used as power transmission elements in precision regulators.

2 Available Packages

PART NUMBER	PACKAGES
CJ78M Series	TO-220-3L
	TO-251-3L
	TO-251S
	TO-252-2L

Fixed Output Voltage Regulator

3 Features

- Output Current:
  up to 500mA at T_J = 25°C
- Available Output Fixed Voltage:
  5.0V, 6.0V, 8.0V, 9.0V and 12V
- Output Voltage Tolerance:
  ±3% at T_J = 25°C
  ±5% over the Operating T_J
- Line Regulation:
  3.0 ~ 10mV (Typ.) at T_J = 25°C
- Load Regulation:
  15 ~ 25mV (Typ.) at T_J = 25°C
- Dropout Voltage: 2.0V@350mA
- Power Supply Rejection Ratio:
  80dB@120Hz (Typ.)
- Operating Junction Temperature:
  -40 ~ 125°C
- Built-in Current Limit
- Short Circuit Protection
- Thermal Shutdown Protection

4 Applications

- Appliances and White Goods
- Building Automation
- Computing & Servers
- Electronic Point-of-sale
- Motor Drives
- On-Card Regulation
- Portable Devices
- Telecommunications
- TVs and Set-top Boxes

5 Orderable Information

MODEL	DEVICE	PACKAGE	OP T_J	ECO PLAN	MSL	PACKING OPTION	SORT
CJ78M-5.0	CJ78M05	TO-220-3L	-40 ~ 125°C	RoHS & Green	N / A for Pkg Type	Tube 50 Units / Rail	Active

5 Orderable Information

Note:

ECO PLAN: For the RoHS and Green certification standards of this product, please refer to the official report provided by SZCJ .

MSL: Moisture Sensitivity Level. Determined according to JEDEC industry standard classification.

SORT: Specifically defined as follows:

Active: Recommended for new products;

Customized: Products manufactured to meet the specific needs of customers;

Preview: The device has been released and has not been fully mass produced. The sample may or may not be available;

NoRD: It is not recommended to use the device for new design. The device is only produced for the needs of existing customers;

Obsolete: The device has been discontinued.

6 Pin Configuration and Marking Information

6.1 Pin Configuration and Function

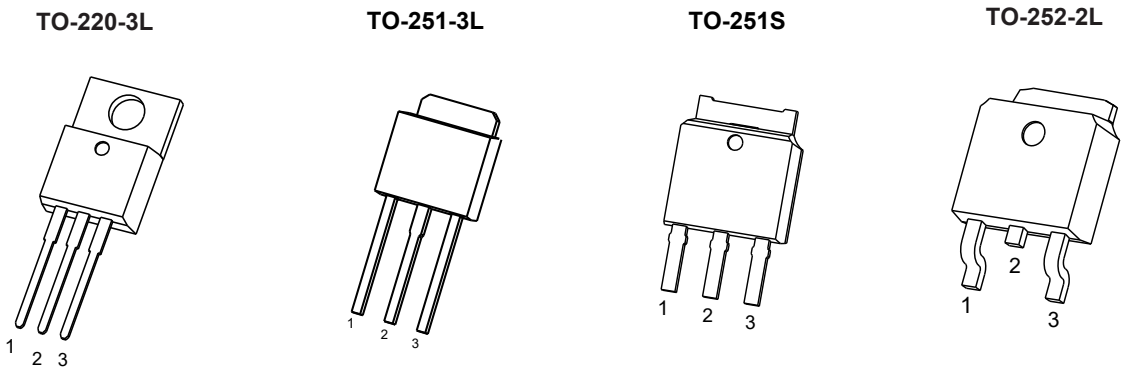

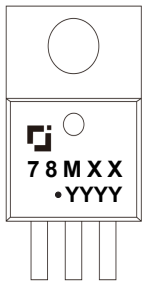

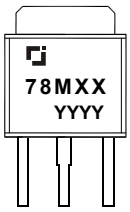

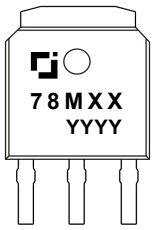

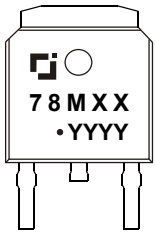

Figure 6-1. CJ78M Series Packages Top View

PIN NAME	CJ78M Series				I / O	DESCRIPTION
	TO-220-3L	TO-251-3L	TO-251S	TO-252-2L		
IN	1	1	1	1	I	Input to the device.
GND	2	2	2	2	-	Regulator ground.
OUT	3	3	3	3	O	Output of the regulator.

6.2 Marking Information

Figure 6-2. CJ78M Series Marking Information

			
TO-220-3L	**TO-251-3L**	**TO-251S**	**TO-252-2L**

"**78MXX**": Device code, the "XX" in the "78MXX" represents the output voltage, for example, if V_{OUT} = 5.0V, the "XX" is "05".

"• " **Solid Dot**: For CJ78M series, in the marking of TO-220-3L and TO-252-2L packages, solid dot represent that the product is a green molding compound device. If none, it means the package is a normal device. It should be noted that this solid dot cannot be used as a basis to distinguish whether other packages of CJ78M series are green molding compound devices.

"**YYYY**": Code.

7 Specifications

7.1 Absolute Maximum Ratings

(over operating free-air temperature range, unless otherwise specified)(1)

CHARACTERISTIC			SYMBOL	VALUE	UNIT
Maximum input voltage(2)			V_{IN}	35	V
Maximum power dissipation	CJ78M Series	TO-220-3L	$P_{D\ Max}$	Internally Limited(3)	W
		TO-251-3L			
		TO-251S			
		TO-252-2L			
Maximum junction temperature			$T_{J\ Max}$	150	°C
Storage temperature			T_{stg}	-65 ~ 150	°C
Soldering temperature & time			T_{solder}	260°C, 10s	-

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute maximum rated conditions for extended periods may affect device reliability.

(2) All voltages are with respect to network ground terminal.

(3) Refer to *Thermal Information* for details.

7.2 Recommended Operating Conditions

PARAMETER	SYMBOL	MIN.	NOM.	MAX.	UNIT
Operating junction temperature	T_J	-40	-	125	°C
Operating ambient temperature	T_A	-	-(4)	-	°C

(4) It is necessary to ensure that the operating junction temperature of the equipment does not exceed the rated value of the recommended operating conditions when using the device for design.

7 Specifications

7.3 ESD Ratings

ESD RATINGS		SYMBOL	VALUE	UNIT
Electrostatic discharge(5)	Human body model	$V_{ESD-HBM}$	2000	V
	Machine model	V_{ESD-MM}	200	

(6) ESD testing is conducted in accordance with the relevant specifications formulated by the Joint Electronic Equipment Engineering Commission (JEDEC). The human body mode (HBM) electrostatic discharge test is based on the JESD22-114D test standard, using a 100pF capacitor and discharging to each pin of the device through a resistance of 1.5kΩ. The electrostatic discharge test in mechanical mode (MM) is based on the JESD22-A115-A test standard and uses a 200pF capacitor to discharge directly to each pin of the device.

7.4 Thermal Information

THERMAL METRIC(6)	SYMBOL	CJ78M Series				UNIT
		TO-220-3L	TO-251-3L	TO-251S	TO-252-2L	
Junction-to-ambient thermal resistance	$R_{\Theta JA}$	66.7	80.0	80.0	80.0	°C/W
Junction-to-case thermal resistance	$R_{\Theta JC}$	5.5	9.0	9.5	6.0	°C/W
Reference maximum power dissipation	$P_{D\ Ref}$	1.50	1.25	1.25	1.25	W

(6) Thermal metric is measured in still air with T_A = 25°C and installed on a 1 in^2 FR-4 board covered with 2 ounces of copper, the thermal resistance test of TO-220-3L packages did not add additional radiators.

Short circuit current	I_{SC}	V_{IN} = 19V, OUT short to GND	-	240	-	mA
Peak current	I_{Peak}	-	-	0.7	-	A

Note:

(8) Pulse test technology is used to make T_J as close to T_A as possible. Thermal effects must be considered separately.

(9) Typical numbers are at 25°C (T_J) and represent the most likely norm.

(10) This specification only applies to the DC power consumption allowed by the absolute maximum rating.

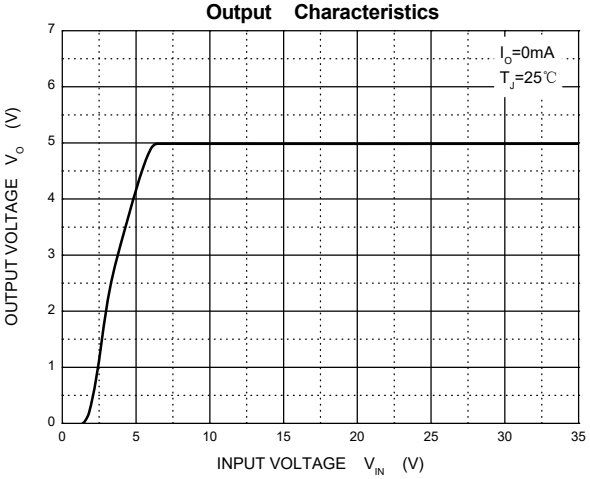

(11) The difference of output voltage and input voltage when input voltage is decreased gradually till output voltage equals to 95% of V_{OUT}.

8 Detailed Description

8.1 Description

This series of fixed-voltage integrated-circuit voltage regulators is designed for a wide range of applications. The applications include on-card regulation for elimination of noise and distribution problems associated with single-point regulation. Each of these regulators can deliver up to 500mA of output current. The internal current-limiting and thermal-shutdown features of these regulators essentially make them immune to overload. In addition to use as fixed-voltage regulators, these devices can be used with external components to obtain adjustable output voltages and currents (not both) and also as the power-pass element in precision regulators.

8.2 Representative Schematic Diagram

8 Detailed Description

8.3 Feature Description

Input Voltage

When the input voltage is lower than the rated range of the data sheet, the device will lose the regulation function of stabilizing the output voltage, that is, it is unable to maintain the output voltage within the rated range. When the input voltage is higher than the rated range of the data sheet, the device may cause irreversible damage or failure due to exceeding the maximum rated range of electrical stress.

Built-in Current Limit & Short Circuit Protection

The CJ78M series has built-in current limit and short circuit protection mechanism. When the output current of the device is too high, the output of the device will be shut down. When the output of the device is short circuited to ground, the output of the device will also be shut down and the output current will be maintained within a certain range.

Thermal Shutdown Protection

The CJ78M series has thermal shutdown protection mechanism. If the junction temperature is allowed to rise to 145°C, the device will enter the thermal shutdown state. At this time, the output voltage of the device will be reduced to prevent catastrophic damage to the chip due to accidental heat. When the junction temperature decreases and no longer remains too high, the device will release the thermal shutdown and output normally. To ensure reliable operation, please limit the junction temperature to the specified range of *Recommended Operating Conditions* in the data sheet. Applications that exceed the recommended temperature range may cause the equipment to exceed its operating specifications.

Although the internal protection circuitry of the device is designed to protect against thermal overall conditions, this circuitry is not intended to replace proper heat sinking. Continuously running the device into thermal shutdown or above the maximum recommended junction temperature reduces long-term reliability.

Output Current

Due to the internal integration of thermal shutdown protection, in the case of large output current, the device may enter the thermal shutdown state because the junction temperature is higher than the rated value in the data sheet. Therefore, the appropriate package should be selected for circuit design according to the heat dissipation power consumption of the package and the effective connection thermal resistance with the environment, so as to make the device emit more heat energy, so as to ensure the maximum load current capacity of the device. If the circuit design is appropriate and the device has good heat dissipation conditions, the CJ78M series can output a current of up to 500mA.

9 Application and Implementation

9.1 Risk Alert and Precautions

The CJ78M series is designed for thermal shutdown protection, built-in current limit and output short circuit protection. However, like any IC regulator, precautions are necessary to reduce the possibility of accidental damage to the regulator. The following describes the possible causes of unit damage or failure:

Electrostatic Discharge (ESD)

Electrostatic discharge (ESD) is a common near-field hazard source. It comes from many sources, such as human body, mechanical equipment and electronic components themselves. ESD can cause phenomena such as high voltage and instantaneous high current in a very short time, resulting in damage or failure of the device due to electric shock.

Instantaneous Electrical Surge

In some applications, a short duration but high energy spike may occur in the circuit, including peak voltage and surge current. They may cause unstable operation of the regulator, accelerated aging and potential hazards, and even damage or malfunction of the regulator. These peaks are usually more likely to occur in hot-plug, switch inductance, heavy-load, and other types of circuits.

Precautions for ESD and Electrical Surge

In the practical application of the circuit, adopting the following suggestions can reduce the possibility of device failure due to the above reasons to a certain extent.

1. Place a TVS between the IN and GND of the voltage regulator to absorb the peak voltage that may be generated due to ESD or other reasons. As shown in Figure 9-1;
2. Place a resistor with appropriate resistance in series before the IN of the voltage regulator, which can help the voltage regulator share part of the energy in case of surge. The resistance value of the resistance should not be too large. The specific resistance value depends on the application of the circuit. Generally, the resistance value of this resistance does not exceed 20Ω. As shown in Figure 9-2.

For the CJ78M series, it is recommended that the input voltage should not exceed 17V and the peak voltage should not exceed 35V. **When the input voltage is greater than 17V, or the peak voltage that may be greater than 35V may appear in the practical circuit, it is recommended to adopt the circuit layout shown in Figure 9-2 in the circuit design.**

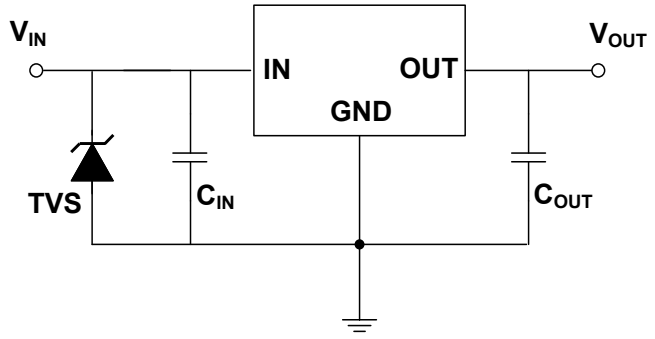

Figure 9-1. TVS is used at IN

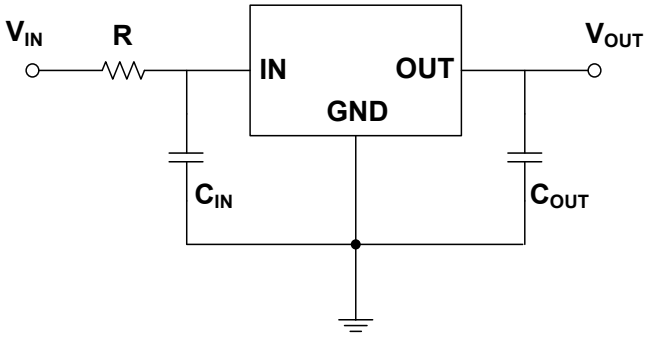

Figure 9-2. Resistance is used at IN

9 Application and Implementation

9.1 Risk Alert and Precautions (continued)

Large Output Capacitance

The CJ78M series can obtain better transient response with the help of output capacitance. However, if the output capacitor is relatively large, the surge current generated by the charging of the output capacitor will also be large at the moment of power on of the regulator, and the large surge current passing through the regulator may damage the internal circuit. When the output capacitance is large, adopting the circuit design shown in Figure 9-2 will reduce the possibility of damage to the device due to large surge current to a certain extent. It is recommended that the selection of output capacitor should not exceed 20μF. **If the selection of output capacitor exceeds 20μF, it is recommended to adopt the circuit design in Figure 9-2 to reduce the possibility of accidental failure of the device due to large surge current during power on.**

9.2 Bypass Capacitance Selection

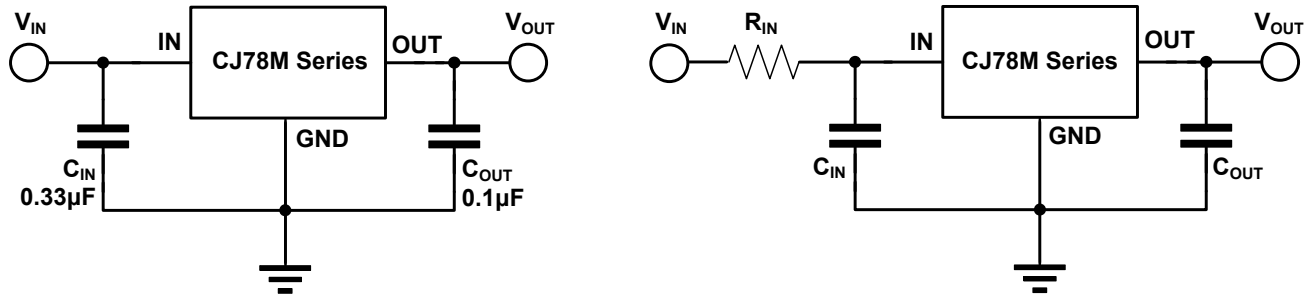

A capacitance between IN and GND (C_{IN}) is required if the regulator is located far from the power supply filter. It is recommended to use a 0.33μF capacitor for C_{IN}, and the capacitor (C_{IN}) should be placed as close to the device IN pin and GND pin as possible.

It is recommended to use a 0.1μF capacitor between OUT and GND (C_{OUT}), and the capacitor should be placed as close as possible between OUT and GND. The output capacitance can limit the high-frequency noise and help the device obtain the best stability and transient response.

The tolerance and temperature coefficient of the input and output capacitor (C_{IN} and C_{OUT}) must be considered to ensure that the capacitor can work normally within the rated working ambient temperature and rated working conditions of the equipment.

It is recommended that the output capacitor (C_{OUT}) should not exceed 20μF. When the output capacitor (C_{OUT}) exceeds 20μF, it is recommended to use the circuit layout shown in Figure 9-2. See *Large Output Capacitance* for more details.

9.3 System Example

(1) Conventional Circuit

Used for the normal form of circuit

(2) Resistance are used at IN

Used for circuits that may have large electrical surges or use large capacitors

Figure 9-3. Fixed Output Regulator

9 Application and Implementation

9.4 Design Requirements and Procedure

The CJ78M series is mainly used to provide fixed output voltage regulation, the output voltage is selected based on the device variant, which is available in 5.0V, 6.0V, 8.0V, 9.0V and 12V regulator options, and it requires a very small number of equipment components. Some layout guidelines must be followed to ensure proper regulation of the output voltage with minimum noise:

- If the device is more than 4 inches from the power filter capacitor, it is recommended to use any type of input bypass capacitor 0.1μF or larger, and use the bypass capacitor to bypass the input terminal to ground. The optimum placement is closest to the input terminal of the device and the system GND;
- Take care to minimize the loop area formed by the bypass-capacitor connection, the input terminal, and the system GND;
- Traces carrying the load current must be wide to reduce the amount of parasitic trace inductance;
- In cases when V_{IN} shorts to ground, an external diode must be placed from OUT to IN to divert the surge current from the output capacitor and protect the IC. This diode must be placed close to the corresponding IC pins to increase their effectiveness.

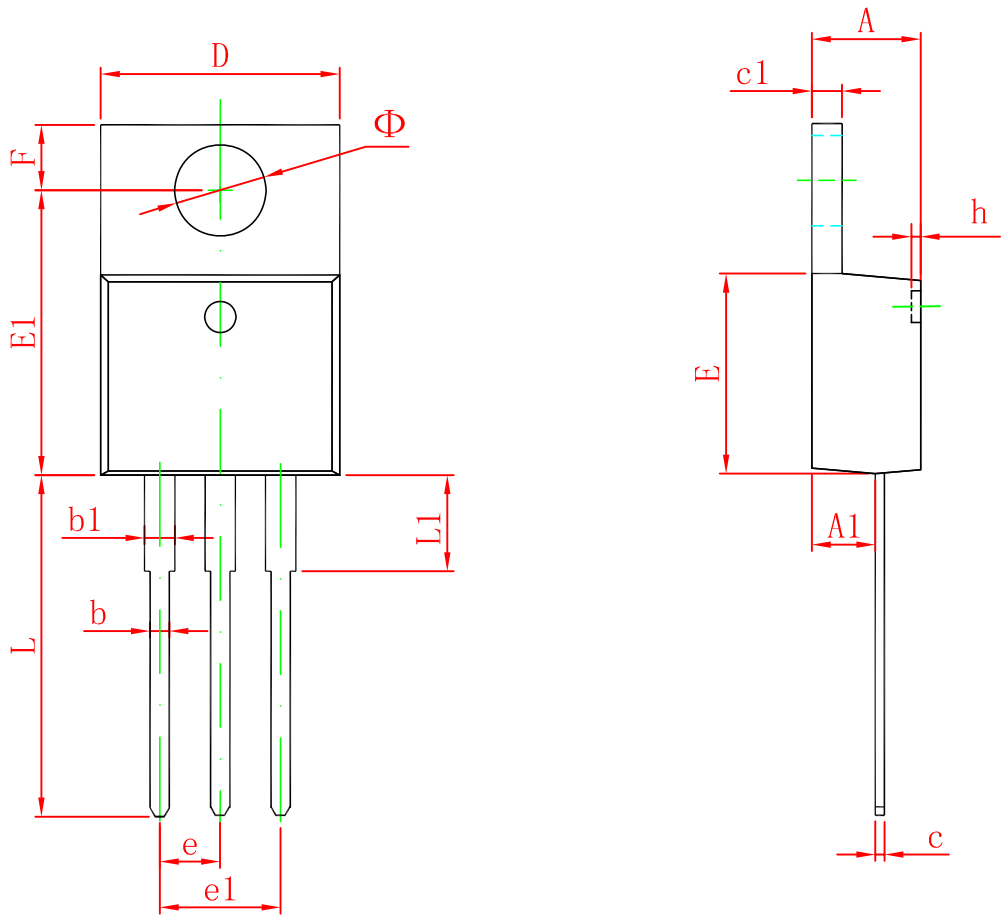

NOTE

The application information in this section is not part of the data sheet component specification, and SZCJ makes no commitment or statement to guarantee its accuracy or completeness. Customers are responsible for determining the rationality of corresponding components in their circuit design and making tests and verifications to ensure the normal realization of their circuit design.

11 Packaging Information

TO-252-2L Tape and Reel Information

TO-252-2L Embossed Carrier Tape

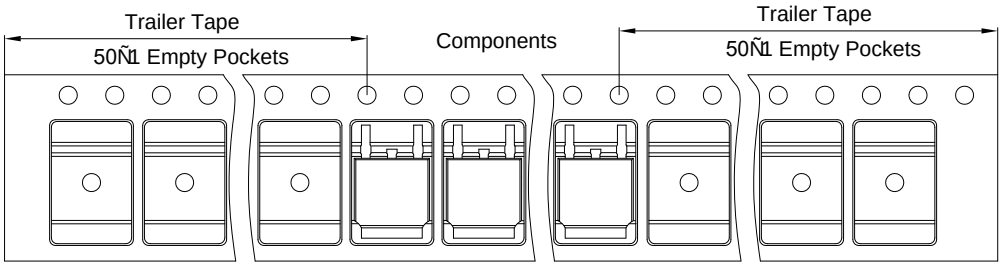

Packaging Description:

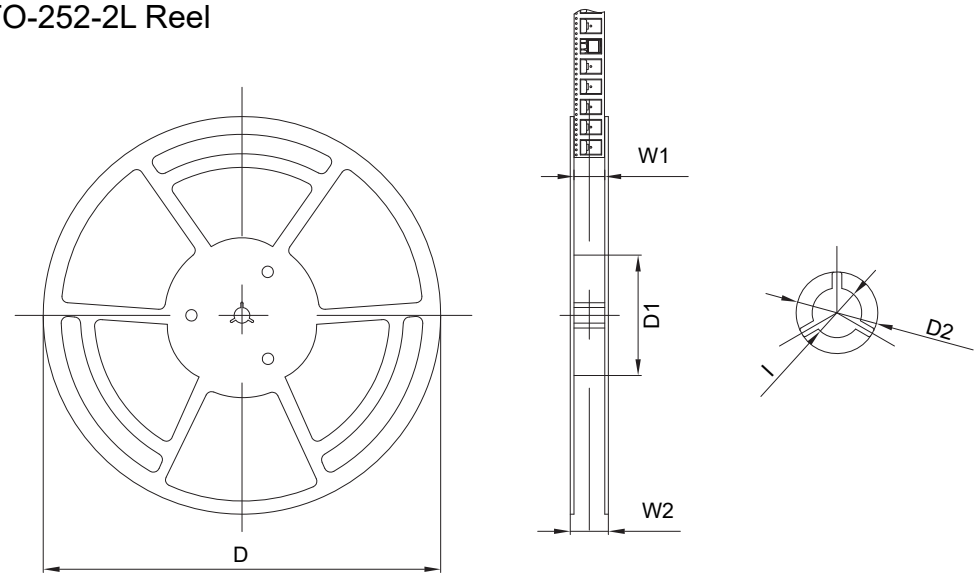

TO-252-2L parts are shipped in tape. The carrier tape is made from a dissipative (carbon filled) polycarbonate resin. The cover tape is a multilayer film (Hear Activated Adhesive in nature) primarily composed of polyester film, adhesive layer, sealant, and anti-static sprayed agent. These reeled parts in standard option are shipped with 2500 units per 13″ or 33.0 cm diameter reel. The reels are clear in color and is made of polystyrene plastic (anti-static coated).

Dimensions are in millimeter										
Pkg type	A	B	C	d	E	F	P0	P	P1	W
TO-252	6.90	10.50	2.70	Φ1.55	1.75	7.50	4.00	8.00	2.00	16.00

TO-252-2L Tape Leader and Trailer

TO-252-2L Reel

Dimensions are in millimeter						
Reel	D	D1	D2	W1	W2	I
13" Dia	330.00	100.00	Φ21.00	16.40	21.40	Φ13.00

Reel	Reel Size	Box	Box Size(mm)	Carton	Carton Size(mm)
2500 pcs	13 inch	5000 pcs	360×360×65	25000 pcs	378×358×382

12 Notes and Revision History

12.1 Associated Product Family and Others

To view other products of the same type or IC products of other types, please click the official website of SZCJ -- ***https: www.szcjsemi.com*** for more details.

12.2 Notes

Electrostatic Discharge Caution

This IC may be damaged by ESD. Relevant personnel shall comply with correct installation and use specifications to avoid ESD damage to the IC. If appropriate measures are not taken to prevent ESD damage, the hazards caused by ESD include but are not limited to degradation of integrated circuit performance or complete damage of integrated circuit. For some precision integrated circuits, a very small parameter change may cause the whole device to be inconsistent with its published specifications.

12.3 Revision History

October, 2023: changed from rev - 3.0 to rev - 3.1:

- Page 6, Thermal Information, added the $R_{\Theta JC}$.

September, 2022: released CJ78M series rev - 3.0:

- Assembled CJ78M05, CJ78M06, CJ78M08, CJ78M09, CJ78M12 devices into the CJ78M series;
- Added Introduction, Available Package, Applications, Pin Configuration and Marking Information, Recommended Operating Conditions, ESD Ratings, Thermal Information, Detailed Description, Application and Implementation and Notes and Revision History section;
- Deleted obsolete CJ78M15 device from the data sheet.

DISCLAIMER

IMPORTANT NOTICE, PLEASE READ CAREFULLY

The information in this data sheet is intended to describe the operation and characteristics of our products. SZCJ has the right to make any modification, enhancement, improvement, correction or other changes to any content in this data sheet, including but not limited to specification parameters, circuit design and application information, without prior notice.

Any person who purchases or uses SZCJ products for design shall: 1. Select products suitable for circuit application and design; 2. Design, verify and test the rationality of circuit design; 3. Procedures to ensure that the design complies with relevant laws and regulations and the requirements of such laws and regulations. SZCJ makes no warranty or representation as to the accuracy or completeness of the information contained in this data sheet and assumes no responsibility for the application or use of any of the products described in this data sheet.

Without the written consent of SZCJ , this product shall not be used in occasions requiring high quality or high reliability, including but not limited to the following occasions: medical equipment, military facilities and aerospace.
